DETAILED ACTION

1. Amendment filed on 06/15/2005 has been entered.
2. Claims 1-9, 11-22 are presented for examination.

Response to Arguments

3. Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

Regarding claims 2-9, line 1, should be changed "The device" to –The semiconductor memory device—as defined in independent claim.

Regarding claims 20-22, line 1, should be changed "The method" to –The method of operating of operating a semiconductor memory device – as defined in independent claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical

Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1-2, 11,15, 19-20,22 are rejected under 35 U.S.C. 102(e) as being anticipated by Zhou et al. (U.S. Patent No. 6,362,669).

Regarding claims 1-2, 11,15, Zhou et al. disclose a semiconductor memory device (Figure 4) comprising:

a voltage level detector (405) configured to sense a voltage and configured to generate a power-up signal (POR1) while the voltage is less than a minimum voltage required to operate the device (Column 3, lines 40-55);

a ready/busy driver controller (410) configured to generate a busy enable signal in response to the power-up signal (Column 3, lines 56-67, Column 4, lines 1-26); and

a ready/busy driver(figure 5, 550) that is response to the busy enable signal (Column 5, lines 3-30), and a command register cooperatively coupled to the ready/busy driver controller (Figure 1, 130), and a level shifter configured to generate the busy enable signal in response to the first and second control signals (Column 3, lines 55-67, Column 4, lines 1-26).

Regarding claims 19-20, 22, the apparatus discussed above would perform the claim method 19-20, 22.

Allowable Subject Matter

6. Claims 3-9, 16-18, 16-18, 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 3-9, 16-18 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Zhou et al. (U.S. Patent No. 6,362,669), and others, does not teach the claimed invention having a erase command register configured to provide a erase busy signal the read/busy driver controller.

7. Claims 12-14 are allowed.

Claims 12-14 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Zhou et al. (U.S. Patent No. 6,362,669), and others, does not teach the claimed invention having a pull up load connected to the ready/busy pin.
